The international conference on clinical toxicology, <https://metdetox.org>, a meeting where academics and clinicians joined force, was held June 10 to 13th in Berlin, Germany. In attendance were physicians and noted scientists from around the world, among them the eminent professors Swaran Flora from India, Boyd Haley, USA, Karolina Kot of Poland, Christopher Exley, UK and others.

The Metdetox conference was organized by Prof. Ulf Lindh of the Biological Education Centre of the University of Uppsala, Sweden and Ann-Marie Lidmark of the Swedish patient dental and disability association Tandvårdsskadeförbundet.

Presentations and discussions focused on environmental issues, involving medical geology, metal toxicology and clinical aspects. Acute and chronic intoxication as causes of cancer, neurodegenerative, cardiovascular and autoimmune diseases were topics presented by scientists and physicians from Belgium, Germany, South Africa, Switzerland and other countries.

About 70 attendees represented Bulgaria, Israel, Saudi Arabia and other countries, exchanging knowledge and practical information on geosciences, genetic aspects, metal toxicology and chelation. Diagnostic biomonitoring information was presented from notables such as Prof. M. Aschner of the Einstein College of Medicine, NY, Doctors. Jose Centeno (FDA, USA), Blaurock-Busch, Germany and Prof. Skalyn of Russia.

Socio-economic costs of heavy metal exposure were discussed. Conference attendees confirmed the need for future meetings to further expedite research, including evidence-based treatment.

(Prof. Boyd Haley during his lecture about safety and effectiveness of new chelating agents.)
